# FUNDA

NEW  
PRODUCT

# Novelty

Prefabricated mould for concrete pillars with architectural concrete.

**“No” self-supporting.**

The mold is positioned inside the metal formwork panels, which resist the pressure of the concrete, to guarantee the sealing and obtain a perfectly smooth finishing.

INSERTING

COVERING

# QUALITY GUARANTEE

Tubotec Funda is composed of a waterproof mold, placed inside an expanded polystyrene sheet, all surrounded on the outside by a layer of reinforced seal.

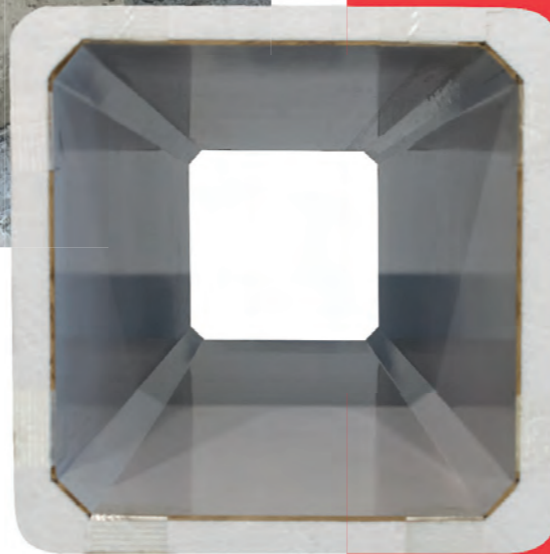

Waterproofing is the key factor in achieving a perfectly smooth finish.

Any water leak when using a conventional formwork system (metal formworks) damages the finish of the pillar.

One of the main features of our Tubotec Funda product is that the concrete of the pillar sets without loss of sealing and to maintain the perfect homogeneity of the concrete components.

## sealing

# ECONOMIC

**50% reduction in total cost** compared to any other alternative of hermetic formworks.
